

Knee reconstruction - ET Post Op Recovery Strategy, Procedures and Results

"So on Wednesday I ruptured my Patella Tendon.

A complete snap! Regarded usually as a young man's injury, at 70 years young, it was serious. The injury was dramatic, but the reconstructive operation was really traumatic. The orthopaedic surgery was done on the Thursday. Back home on Friday. The first pics were taken on the Saturday. You can see Haematoma, Oedema and massive Bruising.

ENAR & INFRABED TREATMENT OF POST OP Knee Surgery - Amazing Results!

" To get good deep ENAR interactive neuro-stim around the surgery, we started with extra-large adhesive electrode sticky pads, covering the knee along both sides of the surgery scar. And then alternately we used the InfraBed Flexi-Belt-Pad around the whole knee, for deep infrared activation thermal therapy, and soon this two therapy approach got us results, with quick reductions in the pain, tenderness and bruising.

After three days the more superficial problems abated, and we were confronted by the deeper problems, from the surgery within the whole leg, the knee, tendons, muscles, internal sutures and nerve trauma.

In week one we made bigger improvements as we moved to using two stainless steel Bell-Mushroom electrodes for deeper therapy. These empower you to really work hands-on finding and treating key therapy points and working across and through the knee and leg where the reconstruction was done.

" The InfraBed Flexi-Belt-Pad is very versatile. It delivers far infrared thermal therapy on the body, activating better circulation, metabolism and immune system response. Large InfraBeds prompt full body rejuvenation, detoxification and deep restful recovery. I was happy to be sleeping and recovering full time with the big King Single InfraBed and Flexi-belt.

Two weeks after returning from hospital, working daily with ENAR and InfraBed, we can see here some great results: No Pain medication was used. Nerve numbness is reduced. Oedema and swelling is almost gone. Bruising is almost all gone and, leg Strength and Flexibility and Range of Motion are much better. There's no agenda to fully flex the knee at this stage, as this, like all tendons, is structural, slow to rehabilitate and can take weeks to build full range of motion and reliable strength.

My leg can now weight bear, heels can lift off and the knee is working well. I am walking on the flat quite perfectly, however, very carefully with steps and ramps.

Paul Keetley, Director, Enlightened Therapies

InfraBed + BioBlanket. These two therapy devices were literally made for each other!

InfraBed's [amethyst infrared](#) subtle, sun-like warmth therapy deeply penetrates most systems of the body, including circulation, metabolism, immune, digestion, excretion and respiration.

Naturopathic and Holistic Integral principles suggest
core thermal activation is central to robust health.

Unique multilayered **Energy BioBlanket** combines EMF **external deflection and protection** together with **internal Infrared and bioenergy reflection** to generate a '**Cocoon**' for reflex feedback effects that synergise with the body and InfraBed's **Far Infrared thermal therapy**

BioBlanket ® features **2 different sides** = (Yin Passive + Yang Active) and was developed with **4 distinct overall Purposes** :-

- 1 to help **Protect** the body by Deflecting away external energy influences
- 2 to help **Balance** the body's multiple energies by establishing a Cocoon
- 3 to help **Reflect back to the body** its own energy output = BioFeedback
- 4 to help **Raise Core Body Temperature** and to Synergise with InfraBed®
